

Error Handling

When a BMS message request arrives at the platform, and it is detected an error, a response message with an error code is sent to the BMS system.

Response Messages

The following is a list of the majority of the messages that can be returned from any web service request.

GENERIC_ERROR("Generic.Error", "An unknown error occurred")
AUTHENTICATION_FAILED("Authentication.Failed", "Authentication failed, please provide the correct username/password")
TASK_NOT_FOUND_QREQ("Task.Not.Found", "No task was found with the quote request number and version specified")
